

Build your digital product master with Oracle product hub powered by Forsys to optimize product data management

About Forsys

Forsys is an Oracle Gold Partner and a Cloud Excellence Implementation Partner, helping businesses build digital product master with Oracle PH Cloud to optimize the way their organization aggregates, manages, and shares product data.

Forsys offers enterprises a complete 360-degree view of a product by connecting multiple authoring sources. It provides the ability to safely and efficiently enrich the product record for commercialization with Oracle Product Hub Cloud seamlessly.

The Background

Organizations leveraging the Oracle Product Hub need to:

- Maintain sync between the two systems, in real-time whenever there is a new product or any update is made to the existing product to ensure the creation of sales orders and purchase orders.
- Deliver on-time product master data leading to accurate and timely reporting for inventory, production, planning, and throughput.
- Ensure full integration of product data management across the enterprise.
- Enforce data governance and connect the supply chain operations.

The Challenges

Here are some of the key challenges faced by the client.

- Delayed new product launches hampering customer satisfaction.
- Poor omnichannel capabilities.
- Delayed regulatory approval and increased compliance risk.
- Delayed production ramp-up.
- Inaccurate planning and forecasting.

Benefits & Results

Using Forsys' expertise, the client was able to:

- Reduce costs associated with re-keying the data and transactional errors.
- Handle unstable & error-prone integration systems, reprocess and point of failure from the source.
- Transfer and synchronize master data from one system to another in real-time.
- Easily mapped data entities between Oracle PDH and Oracle ERP.
- Integrate data from multiple systems using one standardized tool.

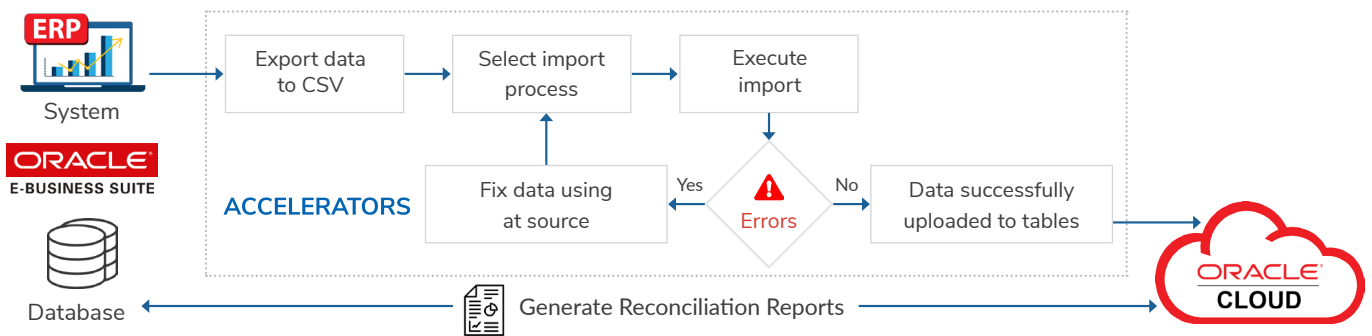

Flodata Capabilities

- Accelerate cloud implementation.
- Migrate data from legacy systems to Cloud or between systems, reconcile, and report errors.
- Build rule-based, transformation-based and business logic based automation of Cloud processes.
- Prebuilt integrations for On-Premise to Cloud, Cloud to Cloud and Third party to Cloud.
- Leverage pre-built accelerators for faster and seamless integrations and enable analytics by moving data from Cloud to data warehouse.
- Large number of connectors available for Oracle Cloud, Oracle EBS, SAP, Work Day, DB2, JSON, XML, Salesforce, Apttus, Big Machines, Agile PLM, Quick books, Netsuite, Sharepoint etc.
- Frequent bulk data loads made faster and easier.
- Ease of Data integration and Migration.

Reduce implementation time up to 50% using Forsys accelerators

Oracle Cloud Adaptor

Integrations using SOAP, REST & FBDI for Finance and SCM

Agile integration with Oracle Cloud ERP and Salesforce

Real Outcomes from Accelerator Customers

30%
Reduction in Cost

38%
Increase in Accuracy

25%
Reduction in implementation time

- Oracle Cloud Implementation and Integration Experts
- Oracle Co-Development Partner (Supply Chain Cloud)
- 20+ years practicing ERP & Supply Chain
